

# TECHNICKÝ LIST /

# Cement screed

## APPLICATION:

For the manual preparation of combined (connected) and floating screeds in internal and external environments.

This product is particularly suitable for areas with requirements for higher strength, resistance, and variable thickness of a layer, such as a sloping layer on balconies, loggias, terraces, communal showers, etc.

The recommended thickness of the sloping layer is 5-100 mm; permissible thickness of the layer is 15-80 mm (thickness of the floating screed layer is dimensioned according to static calculations).

### COMPOSITION:

Aggregates, cement, reinforcing fibres, redispersible polymer, and other additives improving processing and end-use properties of materials.

## **TECHNICAL PARAMETERS:**

MANDATORY					
Compression strength (class M30)	min. 30.0 MPa	Reaction to fire	Class A1 <sub>fl</sub>		
Tensile bending strength (class F6)	min. 6.0 MPa	Volume weight of hardened mortar	2100-2300 kg/m <sup>3</sup>		
Binding force (class B0.5)	min. 0.5 MPa	Coefficient of heat conductivity $\lambda$	min. 1.50 W/m.K *)		
Release of dangerous substances	CT				
*) tabular value					

INFORMATIVE				
_	0-4 mm			
per 1 kg of dry mixture	0.10-0.12 l/kg			
per 1 bag (25 kg)	2.5-3			
Spreading rate				
Pot life				
Recommended thickness of the sloping layer:				
unit – at layer of 10 mm	approx. 19.5 kg/m <sup>2</sup>			
at the recommended thickness	approx. 10-195 kg/m <sup>2</sup>			
Spreading rate from one bag (25 kg) – screed area at an average layer of 50 mm				
Surfaces loaded by walking people (final walking surface) – waiting time				
Durability – number of cycles (frost resistance according to ČSN 72 2452)				
	E per 1 kg of dry mixture per 1 bag (25 kg) unit – at layer of 10 mm at the recommended thickness 50 mm			

NOTE: The technical parameters are determined under standard conditions  $(20 \pm 2)$  °C and  $(65 \pm 5)$ % of relative air humidity.

# TECHNICKÝ LIST /

### **BASE PREPARATION:**

- Composite (contact) screeds should be laid into the contact bridge prepared from OV 30 modified EM 10 (see the a) Technical Data Sheet). The base must be load-bearing, free of dust, grease and loose particles, and should not be frozen.
- b) Floating screeds should be laid on a suitable separating layer. To avoid the creation of cracks, expansion joints are designed depending on the size and shape of surfaces. It is necessary to respect work or construction joints, and perform peripheral extensions of vertical structural elements (walls, pillars, pipes, etc.). To increase the flexibility of heated floors, the EM 10 modification emulsion can be added into OV 30 (see the Technical Data Sheet).

### PROCESSING:

Prepare the screed by mixing the dry mixture with a prescribed amount of water in a drum, or continuous mixer. The water and dry mixture ratio is selected according to the manufacturer's recommendations. Spread the mixed homogeneous mass on the prepared base, and compact the mass with strokes of a trowel. Then, level the surface using a lath, and smooth it with a plastic or steel trowel. Fresh surfaces should be protected from direct effects of thermal radiation (premature drying), and from the action of water. Keep the screed in a wet state for 2-3 days.

### CAUTION:

- The general rules specified in ČSN 74 4505 Floors Common Regulations should be followed when designing, applying, and treating screeds
- The mixture can be mixed only with drinking water, or water conforming to standard EN 1008.
- It is inadmissible to add additional binders, aggregates, and other inadvisable additives. Sifting of the mixture is inadmissible too.
- The mixture can be processed only under the air and base temperature over +5°C! The work cannot be done if frost is expected.
- Unused residues should be mixed with water and allow them to harden they can be disposed of as construction wastes; contaminated containers should be disposed . as of hazardous wastes (see the Safety Data Sheet).
- Only completely emptied and clean packaging may be handed over to recycling

### FIRST AID, SAFETY AND HYGIENE REGULATIONS:

See the product Safety Data Sheet.

### STORAGE:

The product should be stored in original containers - protected from damage, action of water, and high relative air humidity. If the storage conditions are met, the shelf life will be 12 months. The expiration date is specified on the packaging.

### SHIPPING:

The dry mixture is supplied in 25 kg paper bags placed on pallets wrapped in foils.

- OUALITY: The product quality is regularly checked in the manufacturer's laboratories.
- .
- The production control system is used in manufacture, and a certified quality management system, according to ISO 9001, is applied. Continuous surveillance and proving the conformity of products (if necessary) is ensured by TZÚS Prague, OS 1020.
- The use of this product in external environments is specified on the basis of certification, and the issued Construction Technical Certificate.

### DISTRIBUTOR:

LASSELSBERGER, s.r.o., Adelova 2549/1, 320 00 Pilsen - Jižní Předměstí

### VALIDITY:

Since 1 March 2017

We reserve the right to make any changes that are the result of technical progress. This issue cancels and supersedes all previous issues.
